

Outpatient General Surgery: Ingrown Toenail Management & Minor Procedure

Section I: Scenario Demographics

- **Scenario Title:** Outpatient General Surgery: Ingrown Toenail Management & Minor Procedure
- **Target Learning Groups:**
 - General Surgery OPD Personnel (Physicians, Nursing) ○ Patient Services ○ Laboratory Technicians ○ Pharmacy Staff (Outpatient) ○ IT/Health IT Support Staff (**Siratech Specialists**)
- **Timing Parameters:**
 - Set-Up: 20 minutes.
 - Scenario Execution: 45 minutes (focused on efficient outpatient throughput).
 - Debriefing: 20 minutes.

Section II: Scenario Developers

- **Key Stakeholders:**
 - General Surgery Department Leadership ○ Nursing Administration (Outpatient Services) ○ Infection Control ○ **Patient Experience and Quality Oversight Committee** ○ IT/Health IT Support (**Siratech Systems Architecture**)

Section III: Curriculum Integration

- **Educational Goal:** To validate the technical and clinical efficiency of the **outpatient minor procedure workflow** within the active **Siratech HIS**, ensuring seamless transition from assessment to billing and procedure documentation.
- **Operational Objectives:**
 - **HIS Proficiency:** Accurate navigation of the **Siratech OPD Module**, including order entry for labs and minor procedures.

- **Billing Integrity:** Successful execution of the **Patient Services encounter** to ensure billing is finalized prior to the procedure.
- **Clinical Protocol Adherence:** Documentation of the procedure and electronic prescription of discharge medications (antibiotics/analgesics).

Section IV: Scenario Script & Workflow

- **Cast and Equipment:**

- **Patient:** 25-year-old standardized patient (Medically free).
- **Confederates:** OPD Nurses, Surgeon, Registration Clerk, Billing Officer.
- **Required Equipment:** Active **Siratech Workstation**, Minor Surgical Tray (Toenail removal kit), Local anesthetic, Phlebotomy kit.

Scenario Workflow Table

Step	Action / System Trigger	Learner Actions (Siratech Active Protocol)
Step 1: Registration	Patient Arrival at Almather Hospital B20 .	Conduct electronic MRN lookup ; activate patient account for "Outpatient" encounter.
Step 2: Triage	Initial Nursing Assessment.	Save vital signs (Expected: Stable); document chief complaint (3-day right foot pain).
Step 3: In-clinic Assessment	Surgeon Evaluation.	Perform physical exam; enter electronic orders for baseline blood tests (CBC/Coagulation).
Step 4: Billing Encounter	Patient Services Encounter.	Route patient to billing; verify insurance/self-pay authorization for the minor procedure.
Step 5: Reassessment	Post-Laboratory Review.	Surgeon reviews lab results in HIS; confirms patient is cleared for the procedure.
Step 6: Procedure Room	Minor Surgical Encounter.	Document Ingrown Toenail Removal procedure notes; update surgical checklist in the system.
Step 7: Discharge	Home Medications & Follow-up.	Execute Electronic Prescriptions (Pain management & Antibiotics); finalize discharge summary.

Section V: Patient Data and Baseline State

- **Clinical Vignette:** A 25-year-old medically free male presents to the General Surgery clinic with a 3-day history of right foot pain, swelling, and redness around the great toe nail.
- **Patient Profile:**
 - **Age:** 25 ◦ **PMH:** Medically free (No chronic illnesses).
 - **Allergies:** NKDA.
- **Baseline Vitals:**
 - **O2 Saturation:** 99% on Room Air. ◦ **Respiratory Rate:** 16/min. ◦ **Heart Rate:** 72 bpm.
 - **Blood Pressure:** 120/80 mmHg. ◦ **Temperature:** 36.8°C.

Section VI: Supporting Documents & Results

- **Electronic Requisitions:**
 - **Labs:** CBC, PT/INR (Pre-procedure screening).
 - **Pharmacy:** Oral Antibiotics (e.g., Augmentin) and Analgesics (e.g., Ibuprofen).
- **System Verification:**
 - **Billing Audit:** Confirm the "Patient Services Encounter" was completed before the procedure room state was activated.
 - **Data Continuity:** Ensure the MRN is consistent across the lab requisition, billing encounter, and procedure log.
