

STEMI Transfer Pathway

Almather Hospital by KFSH → KFSHRC · Primary PCI

STEMI Pathway — Key Performance Indicators

Time-critical reperfusion metrics for monitoring & QI

KPI	Target*	Measurement (from → to)
PROCESS — TIME		
First ECG time	≤ 10 min	First medical contact / arrival → 12-lead ECG acquired
Interventionist decision time	≤ 10 min	ECG posted to WhatsApp group → accept / decline decision
Door-in–door-out (DIDO)	≤ 30 min	Arrival / STEMI diagnosis at Almather → departure by EMS
EMS activation-to-departure	≤ 15 min	EMS activated → ambulance departs Almather
FMC-to-device	≤ 120 min	First medical contact → wire crossing at KFSHRC cath lab
COMPLIANCE		
FMC-to-device ≤ 120 min achieved	≥ 75%	Monthly proportion of transferred STEMI cases meeting target
DIDO ≤ 30 min achieved	≥ 75%	Monthly proportion of cases meeting target
Pathway documentation complete	100%	All pathway time-stamps captured, per case
Cath lab appropriate activation	Monitor	False-activation rate; reviewed at QI
OUTCOME		
In-hospital mortality (STEMI)	Benchmark	Risk-adjusted, reviewed quarterly against KFSHRC / registry

*Targets are standard reperfusion benchmarks (ACC/AHA / ESC / Mission: Lifeline style) — confirm and adjust for Almather. Denominator = STEMI patients transferred for primary PCI.
